

Superplan Data

The very latest available survey information

We make nearly 5 000 updates everyday, so you can be sure of getting the very latest map.

Site-centred

By putting your focal point at the centre of the map, you see your site relative to the surrounding area, and you only pay for the area you want.

Customised mapping

Superplan Data comes in a Data Exchange Format (DXF™) file, so it can be tailored to your needs. Viewed on screen it can be manipulated, merged with other drawings, then plotted onto paper or film. With the appropriate software, Superplan Data can also be used to plot at a range of scales, or changed to add other relevant information.

Attributes – additional information about a geographical feature, for example, a road's number, maximum width, and speed limit – can also be stored and linked to features.

Nationwide coverage

From city centres to upland moors, Superplan Data covers the length and breadth of Great Britain

Incredible detail and accuracy

You get the detail you need from large-scale mapping, the precision you would expect from the country's leading map supplier.

Up to 60 layers

With so many variables available, you can remove features you do not need, creating a clearer and more focused way of working.

Levelling and height information

With the relevant software Superplan Data allows you to generate a third dimension, over and above basic easting and northing coordinates. An invaluable tool for level surveys.

CAD compatible

Because Superplan Data is supplied in DXF Level 1, it is compatible with most popular CAD systems, so you should not need to invest in new software.

Low volume data files

Superplan Data is vector data – simply a list of coordinates – so files are small, quick to send via email, and storage is no issue.

Buying Superplan Data

Superplan Data is sold exclusively by Options outlets. They offer a high quality, one-to-one service to ensure your data is presented and delivered to meet your needs:

- For total confidence, you can see on screen before you buy.
- Using the rotated data facility, you can buy linear strips of data such as road routes, or follow linear features like canals.
- Superplan Data comes with a one-year copyright licence and a comprehensive user guide.

Your Superplan Data can be ordered through an Options outlet by:

- Telephone
- Email
- Fax
- Visiting the outlet

To best suit your needs, Superplan Data can be supplied as a DXF file or:

- Email
- CD-ROM sent by post or for collection from the outlet
- Floppy disk sent by post or for collection from the outlet
- DVD sent by post or for collection from the outlet

With Options you know you are getting the customised product that suits your requirements, with the highest level of service.

For further information and details of Options outlets visit: www.ordnancesurvey.co.uk/options
